Dear madam/sir,

I am writing this letter in support of my application for the Junior Software Engineer position at Irdeto.

The reason why I consider this job to be perfect for me is my passion for programming. In the last couple of years, I have spent most of my time learning to code in C++, Python, and JavaScript with the goal of becoming a software engineer. I am fascinated by programming and the challenge of solving complex issues in the most efficient way always fuels my desire to learn and become better.

Being keen on changing careers, I started by learning the basics of programming using Coursera and other online resources. I have completed multiple courses focused on Python, SQL, Django, JavaScript, data analysis, and machine learning. I am familiar with using multiple libraries in Python, such as pandas, NumPy, and scikit-learn, and I am also proficient in Django framework and SQL Server. Furthermore, I am working daily on Hackerrank and Codewars, improving my ability to code in Python and JavaScript by solving questions related to data structures, algorithms, and mathematics. I am eager to continue improving my programming skills and to learn from the people around me.

Although some may consider my age to be a disadvantage, I would argue that it is one of my strengths. Throughout my career, I developed a great work ethic and excellent communication skills. Running my own business, I had to deal with demanding clients and work tight deadlines. Being punctual and building long-lasting relationships have been two of the qualities that helped me succeed in this line of business. Thus, I am accustomed to both working independently and in a team. Furthermore, running ultramarathons has taught me to be resilient and calculated, to always keep my goal in sight, and constantly work hard to achieve it. I strongly believe that these are desirable skills in this line of work.

I am keen on making the most out of any chance you are willing to offer me. I am looking forward to proving my knowledge either by sitting an online test or by attending an interview. Thank you for your time and consideration.

Kind regards,

Vasile
